About this course

C++ is a general purpose programming language that supports various computer programming models such as object-oriented programming and generic programming. It was created by Bjarne Stroustrup and, "Its main purpose was to make writing good programs easier and more pleasant for the individual programmer."*

Prerequisites

This course consists of four modules that provide an introduction to the C++ programming language. As a result, there are no prerequisites for this course. However, it is recommended that students have some understanding of basic computer operation, the ability to install applications, and the ability work within a command line on their chosen operating system.
