How to get that color palette preview on the left side, while using the properties Colors? As shown in the video. Screenshot attached below.

https://stackoverflow.com/questions/62017394/flutternot-showing-list-of-color-swatches-for-colors-inandroid-studio

I use dart plugin 193.6911.31 (Mar 25, 2020). It works for me.

Jay 3 months ago

HI,

I'm wondering the same thing...Did you ever figure this out?

like to know why my "I Am Rich" is not at the Center? thanks

Benedicte Roussel a year ago

because your emulator is android, in an ios one It is automatically centred you can centre It that way: void main() { runApp(MaterialApp(home: Scaffold(appBar: AppBar(centerTitle: true, title: Text('I am Rich',),);

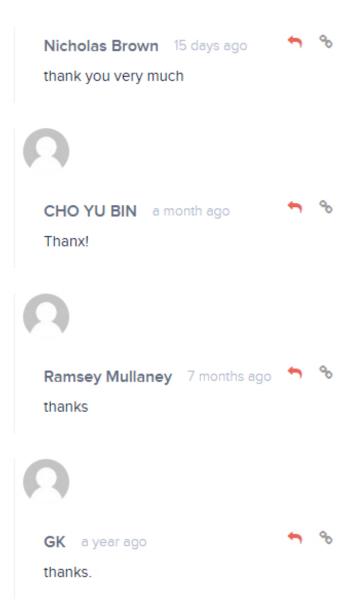

Ahmad 4 days ago

Thanks, but didn't work with me :(I am using a real device not an emulator.

any advice?

Rodrigo Carballo 2 months ago

HI,

Have you seen this error when deploying to an actual IOS device -

Command CodeSign failed with a nonzero exit code. The build fails so from doing research it looks like it is a XCode Bug.

It works fine when deployed to the emulator.

Thank you.

Found Issue -

HI All.

In the AppBar page

(https://api.flutter.dev/flutter/material/AppBar-class.html), there are so many properties, but I can not understand how to code that. like, preferredSize, and this property expecting size. but how do I should write the size? Overall, I am confusing about understanding the property and their expected widgets or elements.

Please provide tips in understanding what is property and widgets and elements expected here. thanks

How does one enable the color palette for blueGrey? Please see the attached Image.

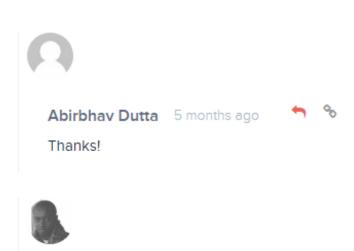

steve v a year ago

2 ways you can do this:

- when you start typing BlueGrey, and your screenshot appears, hit the F1 key (on mac with touchbar, hold down the fn key and the F-keys will appear).
- To make this automatic, go to File->Preferences, then Editor-->General-->Code
 Completion. Check the "Show the
 documentation popup in xxx ms" checkbox and
 save.

What is the difference between these two codes? I got the same output:

```
'https://upload.wikimedia.org/wikipedia/commons/a/aa/Superman_and_Supergirl_DragonCon_2011.jpg'
),

2. Image(
Image: Networkimage(

"https://upload.wikimedia.org/wikipedia/commons/a/aa/Superman_and_Supergirl_DragonCon_2011.jpg"),
),
```
